

Slide into the future with

Protech's line of
Low-Friction powder coatings

PERMASLIP® powders are formulated to produce coatings that exhibit an extremely low coefficient of friction.

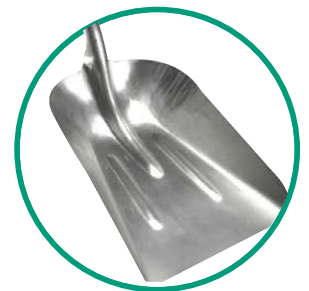

Using the ASTM D4518 test method, PermaSlip® powders have been proven to have a coefficient of friction a full 35% lower than other standard powder coatings.

permaSlip®
LOW-FRICTION Powder Coatings

PERMASLIP® powders exhibit an exceptionally low coefficient of friction, making them the ideal coating solution for specific applications. The PERMASLIP® low-friction characteristic allows interlocking or meshing products to slide effortlessly within each other. It can also allow shopping carts to fit together without fear of chipping. PERMASLIP® powders are also formulated to produce an extremely durable and chip-resistant finish. This hardness, combined with the low coefficient of friction, makes PERMASLIP® the perfect application for earth moving machinery and for commercial snow removal equipment.

PermaSlip® powders come in a wide range of colors and textures and are formulated to provide excellent chemical, stain, and scratch resistance.
