

Looking for germs??

...they're all gone.

SterilcoatAM<sup>®</sup> Antimicrobial Powder Coatings

# Antibacterial Powder Coatings

STERILCOAT® is the Protech Group's line of anti-microbial powder coatings that prevent the spread of dangerous micro-organisms and suppress the growth of mold, bacteria, yeast, and mildew. Independent laboratory results show an almost complete elimination of microbial populations on surfaces coated with STERILCOAT®. These powders are formulated using silver ions, the most powerful and long-lasting natural anti-microbial agent known. Even under humid conditions, a potentially dangerous scenario for increased microbial activity, the silver ions in the powders will release slowly, providing increased and long-term protection. Frequent washing of a STERILCOAT® finished surface will not reduce the powder's anti-bacterial properties. STERILCOAT® powders are extremely durable and demonstrate outstanding chemical and stain resistance. They are available in a wide range of colors and textures and can be formulated to fit your exact needs. STERILCOAT® is the ideal application for handrails, fitness equipment, bathroom partitions, hospital equipment, and any other surface that may breed harmful bacteria.

## ADVANTAGES

- Significantly reduces microbial activity
- Inhibits the growth of dangerous bacteria, mold, mildew and fungi
- Provides protection over an extended period of time
- Reacts to an increase in humidity by releasing more silver ions
- Retains anti-microbial properties even after repeated washings
- Can be formulated for exterior durability
- Superior chemical, stain, and scratch resistance
- Outstanding durability
- Available in a wide range of colors and textures
- Environmentally friendly
